

# Syntax Data and Prometheus ATS Partner to Deliver Indexing Services into Blockchain Securities Infrastructure

Sarah Grieco June 10, 2025

## ***On-chain securities market data integration will power customized indices and next generation blockchain-native investment products***

**NEW YORK, NY (June 10, 2025)** – Syntax Data, a financial data and technology provider offering data-optimized index solutions, today announced a strategic partnership with Prometheus ATS, a FINRA member and SEC-registered broker-dealer and trading platform for blockchain-based securities. Prometheus ATS is a subsidiary of Prometheus Inc. (“Prometheus”), a market infrastructure provider for blockchain-based securities.

Syntax and Prometheus ATS will bridge traditional indexing with blockchain-enabled market infrastructure, supporting the next phase of growth for blockchain-based securities and investment products. The collaboration will start by extending Syntax Direct’s direct indexing capabilities to RIAs and other institutions trading through Prometheus ATS. The firms will also explore the creation of bespoke indices enabling the development of on-chain investment products from RIAs, asset managers, banks, and product issuers.

“At Syntax, we recognize that on-chain securities and investment products are emerging as an indexable product set that will require robust market data services as it matures,” said Sarah Grieco, Director of National Accounts at Syntax Data. “Syntax’s index products provide a compliant path for innovation across structured products and

ETFs in blockchain environments.”

To develop index and data feeds between both parties, Prometheus ATS plans to supply on-chain securities market data into Syntax Direct – Syntax’s scalable platform that enables investment advisors to create customized, branded indices and financial products – while Syntax plans to deliver an index data feed into Prometheus ATS. As more on-chain securities products and index data become available on Prometheus ATS, the partners anticipate asset managers and product managers will launch white-label funds, SMAs, ETFs, and other products that track Syntax indices—each issued, traded, custodied, cleared, and settled on Prometheus’s end-to-end blockchain infrastructure.

“A transparent data layer is the foundation of efficient capital markets,” said Aaron Kaplan, co-CEO of Prometheus Inc. “As securities and investment funds increasingly migrate to blockchain rails, investors need the same reliable indices and analytics they rely on in traditional markets. By partnering with Syntax, we’re ensuring those building blocks are in place from day one.”

These direct indexing capabilities are expected to be available soon to all RIAs and institutions trading through Prometheus ATS. For more information on Syntax Direct, [please click here](#). For more information on Prometheus ATS, [please click here](#).

## **ABOUT SYNTAX DATA**

Syntax Data is a financial data and technology company that empowers investment managers, wealth advisors, and financial institutions with precise, transparent data solutions that optimize index development, portfolio customization, and investment analysis to drive better investment outcomes. Syntax operates through three segments: Affinity® Data, Syntax Direct, and Syntax Indices. Built on its patented Functional Information System (FIS®) technology inspired by systems sciences, Syntax's solutions are powered by the most comprehensive, granular, and accurate revenue-derived data available on the market.
